3.3 – Data Flow Diagram

1. **Customer** enters food preferences, restaurant choices, and order details through the food ordering platform.
2. The **Food Ordering System** receives and validates customer information and order requests.
3. Customer data is stored in the **User Database** for profile and preference analysis.
4. Order details are sent to the **Restaurant Management System** for processing and preparation.
5. The restaurant updates order status, availability, and estimated delivery time.
6. Payment information is processed through the **Payment Gateway** and transaction records are stored.
7. The **Delivery Partner System** receives delivery requests and updates delivery status.
8. Customer feedback, ratings, and reviews are collected after order completion.
9. All transactional and behavioral data are stored in the **Consumer Trends Database** for analysis.
10. The **Analytics Module** generates insights on ordering patterns, customer preferences, spending habits, and emerging food trends for decision-making.
