PROJECT PLANNING AND SCHEDULING

5.1 – Project Milestones & Tasks

The **Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits** project was completed through a series of well-defined milestones and tasks. Each phase focused on collecting, analyzing, visualizing, and presenting data to generate meaningful insights into customer ordering behavior and food consumption patterns.

Milestone 1: Project Planning and Requirement Analysis

The first milestone involved defining the project objectives, scope, and expected outcomes. Requirements were gathered to identify key metrics such as customer ratings, cuisine preferences, meal types, revenue contribution, delivery time, and order volume. The dataset structure and analytical goals were finalized during this phase.

Milestone 2: Data Collection and Preparation

The food ordering dataset was collected and imported into Tableau. Data cleaning activities were performed to remove inconsistencies, handle missing values, and ensure data accuracy. Relevant dimensions and measures were identified and organized for analysis.

Milestone 3: Data Modeling and Calculations

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

Calculated fields and KPIs were created to support advanced analysis. Metrics such as total orders, average ratings, delivery performance, revenue contribution, and customer preferences were developed. Data relationships and field hierarchies were established to improve reporting efficiency.

Milestone 4: Visualization Development

Multiple visualizations were created to analyze different aspects of food ordering behavior. These included heat maps, bar charts, stacked bar charts, donut charts, pie charts, and KPI dashboards. Each visualization was designed to highlight specific trends and customer insights.

Milestone 5: Dashboard Design and Integration

All worksheets were integrated into interactive dashboards. Filters, legends, tooltips, and navigation controls were added to improve user interaction. The dashboard layout was optimized for readability, consistency, and effective storytelling.

Milestone 6: Story Creation and Insight Presentation

A Tableau Story was developed to present findings in a structured sequence. Story points were created for customer ratings, cuisine preferences, city-wise order distribution, revenue analysis, and delivery performance. Captions and descriptions were added to explain key insights.

Milestone 7: Testing and Validation

The dashboards and stories were thoroughly tested to verify data accuracy, filter functionality, and visualization performance. Any issues identified during testing were corrected to ensure reliable analytical results.

Milestone 8: Final Documentation and Deployment

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

The final phase included preparing project documentation, conclusions, future scope, advantages, and limitations. The completed dashboard and story were published and made ready for presentation, enabling stakeholders to explore food ordering trends and consumer behavior effectively.
