

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

TEAM ID	SWTID-2026-9834
PROJECT TITLE	Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits
MAX MARKS	2 MARKS

5.2 – Sprint Delivery Plan

Sprint 1: Planning and Requirement Analysis

The project began with defining objectives, identifying key business requirements, and understanding the dataset. Important KPIs such as total orders, ratings, revenue contribution, customer preferences, and delivery performance were finalized. A project roadmap and sprint schedule were prepared to guide development activities.

Sprint 2: Data Collection and Preparation

The food ordering dataset was collected, imported into Tableau, and cleaned for analysis. Missing values, duplicate records, and inconsistencies were handled to improve data quality. Dimensions and measures were organized to support accurate reporting and visualization.

Sprint 3: Data Modeling and Visualization Development

Calculated fields and performance metrics were created to support advanced analysis. Various visualizations, including KPI tables, heat maps, stacked bar charts, pie charts, donut charts, and revenue analysis charts, were developed to uncover customer behavior patterns and business insights.

Sprint 4: Dashboard Design and Integration

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

All worksheets were integrated into interactive dashboards. Filters, legends, tooltips, navigation options, and formatting enhancements were added to improve usability. Dashboard layouts were optimized to ensure clarity, consistency, and effective data presentation.

Sprint 5: Story Creation and Testing

A Tableau Story was created to present insights in a logical sequence. Story points were developed for cuisine trends, customer ratings, order distribution, city-wise analysis, revenue contribution, and delivery performance. Functional testing was performed to validate dashboard accuracy and interactivity.

Sprint 6: Documentation and Deployment

The final sprint focused on preparing project documentation, conclusions, advantages, limitations, and future scope. Dashboards and stories were published and deployed for stakeholder review. The completed solution provided meaningful insights into customer ordering behavior, cuisine preferences, revenue patterns, and delivery trends.

Outcome

The Sprint Delivery Plan ensured smooth project execution, timely completion of milestones, and successful delivery of an interactive Tableau-based analytical solution. This structured approach enabled effective decision-making through data-driven insights and comprehensive visualization of food ordering behavior and consumer trends.
