

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

TEAM ID	SWTID-2026-9834
PROJECT TITLE	Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits
MAX MARKS	3 MARKS

6.3 – Data Preparation

Cuisine Demand & Order Performance Metrics	KPI
Flavors Across Cities by Cuisine Type	Heat Map
Order Distribution by Age Group and Restaurant Segment	Grouped Bar Chart
Analysis of Orders Across Company Type and Meal Type	Bar Chart
Customer Rating Analysis by Meal Type	Donut Chart
Revenue Contribution by Meal Type	Bar Chart
Distribution of Customer Preferences Across Cuisines	Pie Chart
Cities by Order Volume	Bar Chart
Distribution of Delivery Time Across Orders	Bar Chart

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

1. Cuisine Demand & Order Performance Metrics

- Open a new worksheet and connect to the food ordering behavior dataset.
- Drag Measure Names to the Columns shelf.
- Drag Measure Values to the Text card on the Marks pane.
- Drag Measure Names to Filters and select Order Id, Order Value, Rating Given, and Delivery Fee.
- Change Order Id aggregation to COUNT (CNT) to display Total Orders.
- Keep SUM(Order Value), SUM(Rating Given), and SUM(Delivery Fee) in Measure Values.
- Rename the headers to Total Orders, Orders Values, Rating Given, and Delivery Fee.
- Format the numbers with comma separators and adjust the font size for readability.
- Add the worksheet title "Cuisine Demand & Order Performance Metrics" and center-align it.
- Remove unnecessary grid lines and borders to create a clean KPI dashboard like the one shown in the image.

Output:

2. Flavors Across Cities by Cuisine Type

- Create a New Worksheet
 - Open a new sheet and rename it Flavors Across Cities by Cuisine Type.
- Add Rows and Columns
 - Drag City to the Rows shelf.
 - Drag Cuisine to the Columns shelf.
- Select Heat Map Layout
 - On the Marks card, change the mark type to Square.
- Add Color Measure
 - Drag Rating Given to Color.
 - Set aggregation to SUM.
- Add Label Measure
 - Drag Rating Given again to Label (Text).
 - Change aggregation to COUNT.
- Display Labels
 - Click Label and enable Show Mark Labels.
- Adjust Square Size
 - Click Size and move the slider right until the squares fill the view.
- Format Colors
 - Click Color → Edit Colors.
 - Choose an Orange Sequential palette and apply.
- Customize Tooltip
 - Edit the tooltip to display:
 - City
 - Cuisine
 - Count of Rating Given
 - Sum of Rating Given
- Finalize the Visualization

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

- Set Fit → Entire View.
- Add the title "Flavors Across Cities by Cuisine Type" and center-align it.

Output:-

3. Order distribution by age group and restaurant segment

- Drag Age Group to the Columns shelf.
- Drag Order Id to the Rows shelf.
- Set Order Id aggregation to Count (CNT).
- Change Marks type to Bar.
- Drag Restaurant Type to Color on the Marks card.
- Enable Analysis → Stack Marks → On.
- Drag CNT (Order Id) to Label and enable Show Mark Labels.
- Format colors for Budget, Mid-range, and Premium segments.
- Add the title "Order Distribution by Age Group and Restaurant Segment" and adjust formatting for readability.

Output:-

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

4. Analysis of Orders Across Company Type and Meal Type

- Create a New Worksheet
 - Open a new sheet and rename it Analysis of Orders Across Company Type and Meal Type.
- Add Company Category
 - Drag Company to the Columns shelf.
- Add Meal Type
 - Drag Meal Type next to Company on the Columns shelf.
- Add Order Count
 - Drag Order Id to the Rows shelf and set it to CNT(Order Id).
- Create the Bar Chart
 - Select Bar from the Marks card.
- Filter the Meal Type

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

- Drag Meal Type to Filters and select Snacks.
- Convert to Percentage
 - Right-click CNT(Order Id) → Quick Table Calculation → Percent of Total.
- Show Percentage Labels
 - Drag CNT(Order Id) to Label and apply the same Percent of Total calculation.
- Format the Visualization
 - Format labels as percentages (2 decimal places) and adjust bar colors if needed.
- Finalize the Chart
 - Set Fit → Entire View, edit the title, and customize tooltips to display Company, Meal Type, Order Count, and % of Total Orders.

Output:-

5. Customer Rating Analysis by Meal Type

- Create a new worksheet and rename it Customer Rating Analysis by Meal Type.
- Create a calculated field dummy 1 = 0 and drag SUM(dummy 1) twice to the Columns shelf.
- Change the Marks type of the first SUM(dummy 1) to Pie.

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

- Drag Meal Type to Color to create different segments.
- Drag SUM(Rating Given) to Angle to size the slices based on ratings.
- Drag Meal Type and SUM(Rating Given) to Label to display category names and values.
- Change the second SUM(dummy 1) Marks type to Pie and reduce its Size to create the donut hole.
- Right-click the second axis and select Dual Axis, then synchronize and hide the headers.
- Adjust the donut size, labels, and colors for better readability and formatting.
- Add the title and a Meal Type Highlight Filter to create the final interactive donut chart.

Output:-

6. Revenue Contribution by Meal Type

- Create a new worksheet and rename it Revenue Contribution by Meal Type.
- Drag Meal Type to the Columns shelf to create separate categories.
- Drag Order Id to the Rows shelf and change its aggregation to SUM.

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

- Set the Marks type to Bar to display a vertical bar chart.
- Drag Meal Type to Color to assign different colors to each bar.
- Drag SUM(Order Id) to Label to display revenue values on the bars.
- Drag Order Id to the Filters shelf if you want to filter specific records or ranges.
- Format the Y-axis numbers and labels for better readability (e.g., millions).
- Add and center the title "Revenue Contribution by Meal Type" and adjust font sizes.

Output:-

7. Distribution of Customer Preferences Across

- Create a new worksheet and rename it Distribution of Customer Preferences Across Cuisine.
- Change the Marks type to Pie from the Marks card.
- Drag Cuisine to Color to create separate pie slices for each cuisine type.
- Drag Order Id to Angle and change its aggregation to COUNT (CNT).

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

- Drag Cuisine to Label to display the cuisine names on the chart.
- Drag CNT(Order Id) to Label to show the number of orders for each cuisine.
- Drag Cuisine to the Filters shelf to enable filtering by cuisine type.
- Increase the pie Size and format labels for better readability.
- Add and center the title "Distribution of Customer Preferences Across Cuisine".
- Apply suitable colors, remove unnecessary grid lines, and finalize the interactive pie chart dashboard.

Output:-

— ACHIEVERS —

8. Cities by Order Volume

- Drag City to the Columns shelf to display each city on the X-axis.
- Drag Order Id to the Rows shelf and change the aggregation to COUNT (CNT).

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

- Change the Marks type to Bar to create a vertical bar chart.
- Drag age group to Color to split each bar into age-group segments (stacked bars).
- Drag SUM(Order Value) to Label to display values inside each segment.
- Ensure Analysis → Stack Marks → On is enabled to create stacked bars.
- Format the labels, axis, and numbers for better readability.
- Add and center the title "Cities by Order Volume" and adjust fonts and colors.
- Remove unnecessary grid lines and add filters (City or Age Group) to make the dashboard interactive."

Output:-

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

9. Distribution of Delivery Time Across Orders

- Create a new worksheet and rename it Distribution of Delivery Time Across Orders.
- Drag CNT(Order Id) to the Columns shelf to measure the number of orders.
- Drag Order Time to the Rows shelf to create groups (Morning, Afternoon, Evening, Night).
- Drag Meal Type next to Order Time on the Rows shelf to split each time period by meal type.
- Change the Marks type to Bar to create horizontal bars.
- Drag Order Time to Color to assign different colors to each delivery time category.
- Drag Order Time to Label to display the time period on each bar.
- Sort the bars within each group if required for better comparison.
- Add and center the title "Distribution of Delivery Time Across Orders" and format fonts and labels.
- Remove unnecessary grid lines, adjust bar sizes, and apply filters or highlights to make the chart interactive.

Output:-
