

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

STORY 02:- Flavors Across Cities by Cuisine Type

1. Open Tableau and create all required worksheets, including the **Flavors across Cities by Cuisine Type** heat map and other analysis charts.
2. Click the **New Story** button at the bottom of the Tableau workspace to create a Story sheet.
3. Set the **Story Size** and add a meaningful title for the food ordering analysis project.
4. Drag the Heat Map worksheet and other dashboards onto the Story canvas as separate **Story Points**.
5. Add captions explaining insights such as city-wise cuisine preferences, ratings, and customer ordering trends.
6. Arrange the Story Points in a logical sequence, preview the navigation, and publish the final Tableau Story.

STORY 03:-Order distribution by age group and restaurant segment

1. Create the **Order Distribution by Age Group and Restaurant Segment** stacked bar chart worksheet using Age Group, Order Count, and Restaurant Type fields.
2. Build all other required worksheets and dashboards for the food ordering analysis project.
3. Click **New Story** in Tableau and choose an appropriate story size and layout.

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

4. Add a title such as **Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits**.
5. Drag the stacked bar chart and other worksheets onto the story canvas as separate **Story Points** and add captions.
6. Arrange the story points in sequence, verify navigation and interactivity, then save or publish the final Tableau Story.

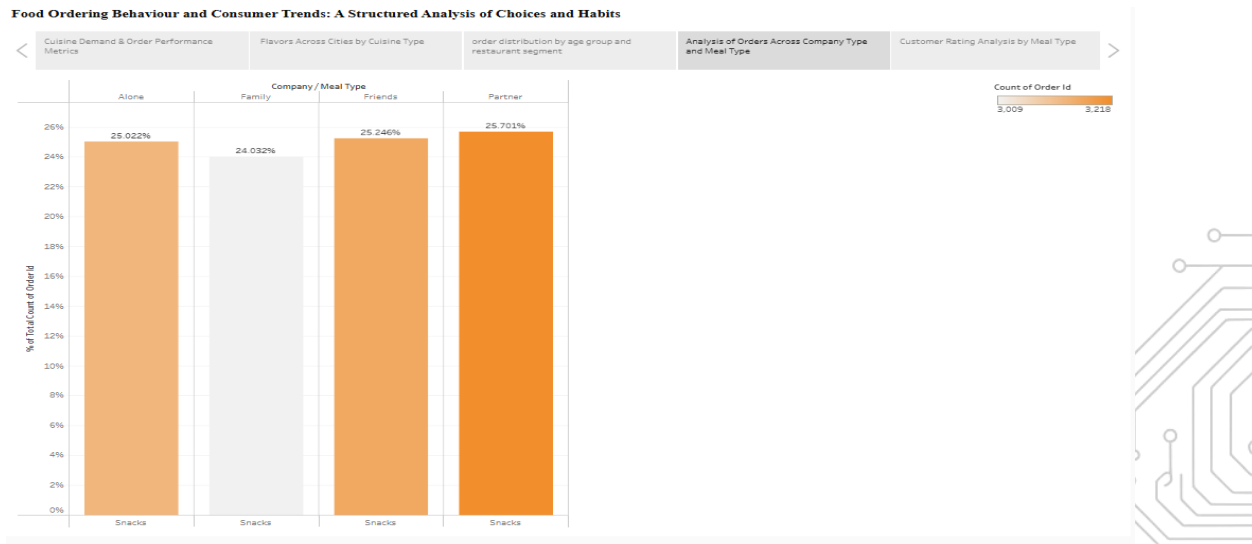

STORY 04:- Analysis of Orders Across Company Type and Meal Type

1. Create the **Analysis of Orders Across Company Type and Meal Type** chart using Company, Meal Type, and Order Count measures.
2. Build all required worksheets and dashboards that represent different aspects of food ordering behavior.
3. Click **New Story** at the bottom of Tableau to create a Story sheet and set the desired story size.
4. Add a project title such as **Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits**.
5. Drag this worksheet and other dashboards into the story as separate **Story Points** and add descriptive captions.

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

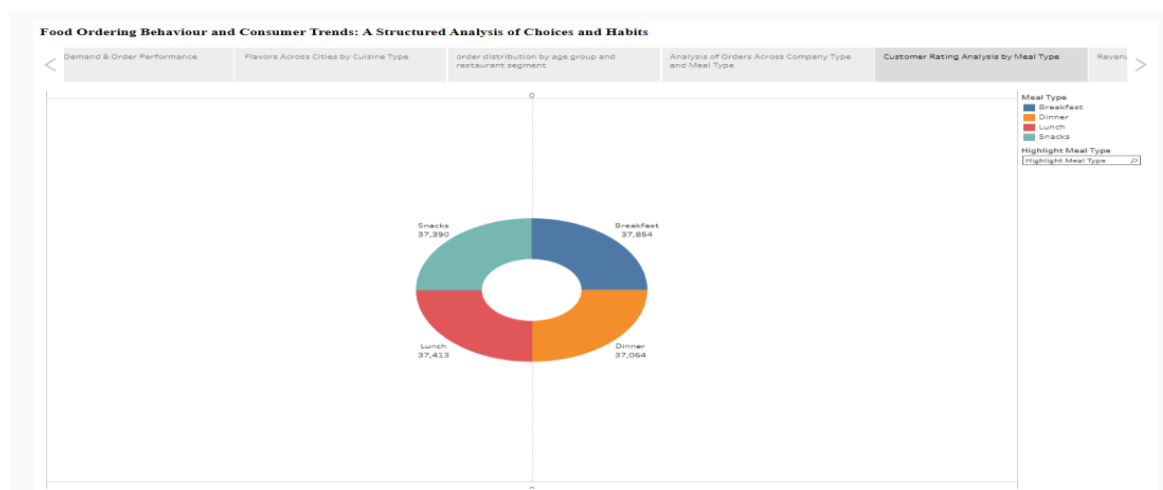

6. Arrange the story points in a logical flow, test navigation between insights, and publish the completed Tableau Story.

STORY 05:- Customer Rating Analysis by Meal Type

1. Create the **Customer Rating Analysis by Meal Type** donut chart using Meal Type and Rating measures.
2. Develop all required worksheets and dashboards to analyze food ordering behavior and consumer trends.
3. Click the **New Story** icon in Tableau and choose an appropriate story size.
4. Add a title such as **Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits**.
5. Drag the donut chart and other dashboards into the story as separate **Story Points** with descriptive captions.
6. Arrange the story points in sequence, review the flow of insights, and publish the final Tableau Story.

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

STORY 06:- Revenue Contribution by Meal Type

1. Create the **Revenue Contribution by Meal Type** bar chart using Meal Type and Revenue (Order Value) measures.
2. Build all supporting worksheets and dashboards required for the food ordering analysis project.
3. Click **New Story** in Tableau and set the story size according to the dashboard layout.
4. Add a title such as **Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits**.
5. Drag the Revenue Contribution chart and other visualizations into the Story as separate **Story Points** and add captions.
6. Arrange the story points in a logical sequence, review the presentation flow, and publish the final Tableau Story.

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

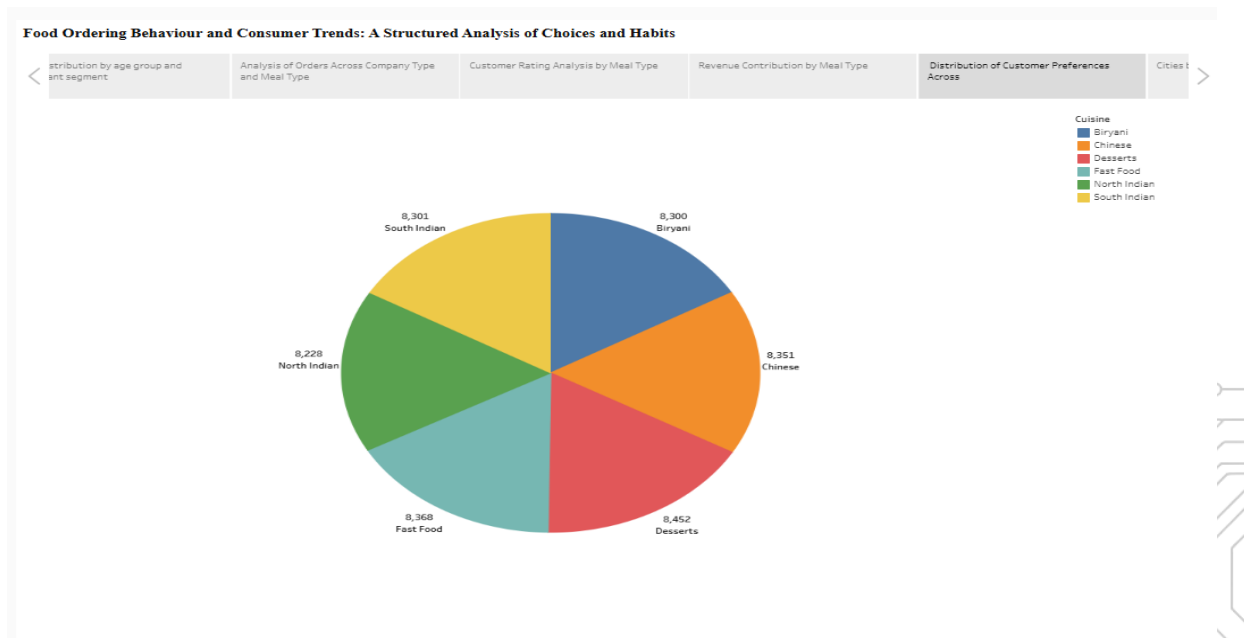

STORY 07:- Distribution of Customer Preferences Across Cuisine Types

1. Create the **Distribution of Customer Preferences Across Cuisine Types** pie chart using Cuisine and Order Count fields.
2. Develop all required worksheets and dashboards to analyze customer preferences and ordering behavior.
3. Click the **New Story** icon in Tableau and select an appropriate story size.
4. Add a title such as **Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits**.
5. Drag the Customer Preferences pie chart and other dashboards into the story as separate **Story Points** with captions.
6. Arrange the story points logically, review the insights flow, and publish the final Tableau Story.
