

Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

TEAM ID	SWTID-2026-9834
PROJECT TITLE	Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits
MAX MARKS	5 MARKS

CHAPTER – VII

FUNCTIONAL AND PERFORMANCE TESTING

7.1 – Performance Testing & Functional Testing

Amount of Data Rendered

The dashboard analyzes approximately 5,000–10,000 food order records collected from customers. The data includes order frequency, spending patterns, preferred cuisines, payment methods, and delivery preferences, providing a comprehensive view of consumer behavior.

Utilization of Data Filters

Interactive filters are used to improve data exploration and analysis. Key filters include Age Group, Gender, Location, Cuisine Type, Payment Method, Order Frequency, and Delivery Preference, enabling users to examine specific customer segments and trends.

No. of Calculation Fields

The project uses 10–15 calculated fields to generate meaningful insights. These include metrics such as Average Order Value, Total Revenue, Customer Retention Rate, Discount Usage Rate, and Monthly Spending, helping measure customer engagement and business performance.

Number of Visualizations / Graphs

The dashboard contains 8–12 visualizations to present findings effectively. These include Bar Charts, Pie Charts, Line Graphs, Trend Analysis Charts, Heat Maps, Customer Segmentation Charts, and KPI Cards, making it easier to identify patterns and consumer preferences.
