

9.2 – Disadvantages

1. The analysis depends heavily on the accuracy and completeness of collected data.
2. Missing, duplicate, or inconsistent records can affect the reliability of insights.
3. Customer preferences and market trends can change rapidly, reducing the relevance of historical data.
4. Data privacy and security concerns may arise when handling customer information.
5. Integration of data from multiple sources can be complex and time-consuming.
6. The project may require significant data cleaning and preprocessing efforts.
7. Small datasets may not accurately represent overall consumer behavior.
8. External factors such as seasonal trends, promotions, and economic conditions may influence results.
9. Advanced analytics tools and infrastructure can increase implementation costs.
10. Tableau and SQL require technical expertise for effective analysis and dashboard development.
11. Predictive insights may not always be accurate due to changing consumer preferences and market dynamics.
12. Continuous monitoring and updates are required to maintain the accuracy and usefulness of the analysis.
